2 Subset based on hst=WA and year

2.1 First, split the combined year-quarter of diagnosis and AIDS variables

```
################################################################
# SPLIT COMBINED YR-QTR VARIABLE
################################################################
# Year, quarter, and quarter-year of Dx (diagnosis)
dataf$yearDx <- as.numeric(substring(dataf$hdx_yr_qtr,0,4))
dataf$quarterDx <- as.numeric(substring(dataf$hdx_yr_qtr,6,6))
dataf$timeDx <- dataf$yearDx + (dataf$quarterDx-1)/4
# AIDS at Dx - if missing, assumed to be false
dataf$aidsAtDx <- dataf$hdx_yr_qtr == dataf$adx_yr_qtr
dataf$aidsAtDx[is.na(dataf$aidsAtDx)] <- FALSE
# Year, quarter, and quarter-year of AIDS (diagnosis)
dataf$yearAids <- as.numeric(substring(dataf$adx_yr_qtr,0,4))
dataf$quarterAids <- as.numeric(substring(dataf$adx_yr_qtr,6,6))
dataf$timeAids <- dataf$yearAids + (dataf$quarterAids-1)/4
```

2.2 Subset the data based on hst=WA and year

```
################################################################
# SUBSET THE DATA - INITIAL RESTRICTIONS
################################################################
if (!'year_min'%in%ls()) year_min <- 2005
if (!'year_max'%in%ls()) year_max <- 2013

# Year min and max for this run
c(year_min, year_max)
```

```
## [1] 2005 2016
```

```
# Non-sequential look
table(hst_included=dataf$hst=='WA', useNA='ifany')
```

```
## hst_included
##  TRUE
## 21098
```

```
table(yearDx_included=dataf$yearDx>=year_min & dataf$yearDx<=year_max,
      useNA='ifany')
```

```
## yearDx_included
## FALSE  TRUE
## 14987  6111
```

```

(Nobs1 <- nrow(dataf))
```

```
## [1] 6111
```

Excluded 14987 cases based on year and hst restrictions and missingness in age and year of diagnosis.

2.3 New sample size

New sample size is 6111

3 Year and quarter of diagnosis: cleaning it up

3.1 Years represented

```
##
## 2005 2006 2007 2008 2009 2010 2011 2012 2013 2014 2015 2016
##  561  535  583  539  546  556  493  509  455  444  458  432
```

3.2 Quarters represented

```
##
##    1    2    3    4 <NA>
## 1589 1562 1513 1436   11
```

3.3 Distribute unknown quarters uniformly across Q1-Q4

```
################################################################
# IMPUTE A QUARTER IF ONLY YEAR IS KNOWN
################################################################
impute_qtr <- !is.na(dataf$yearDx) & is.na(dataf$quarterDx)
set.seed(98103)
dataf$quarterDx[impute_qtr] <- sample(4, size=sum(impute_qtr),
                                      replace=TRUE)
dataf$timeDx <- dataf$yearDx + (dataf$quarterDx-1)/4
summary(dataf$timeDx, digits=6)
```

```
##    Min. 1st Qu.  Median    Mean 3rd Qu.    Max.
## 2005.00 2007.50 2010.25 2010.56 2013.50 2016.75
```

```
time_min <- min(dataf$timeDx)
time_max <- max(dataf$timeDx)

# Time min and max for this run
c(time_min, time_max)
```

```
## [1] 2005.00 2016.75
```

4 Tabulate and collapse race and mode of diagnosis variables

4.1 Race and mode by year

6 Ever had a last negative test (everHadNegTest)

6.1 Coding

This variable will be coded as Yes=TRUE, No=FALSE, and Don't Know/Refused/Missing=NA

```
#####################################################################
# CREATE everHadNegTest
#####################################################################
# Define everHadNegTest based on tth_ever_neg
# 2015 data update: this variable was coded numerically, so I have
# added that option in.
dataf <- transform(dataf,
                   everHadNegTest=ifelse(tth_ever_neg=='Y' | tth_ever_neg==1, TRUE,
                                         ifelse(tth_ever_neg=='N' | tth_ever_neg==2, FALSE, NA)))
with(dataf,table(everHadNegTest, tth_ever_neg, useNA='always'))
```

```
##                tth_ever_neg
## everHadNegTest    1    2    5 <NA>
##          FALSE    0  711    0    0
##          TRUE  2941    0    0    0
```

```
##          <NA>     0    0 2459    0
```

```
# Now cross-check it with the lag_lneg_hdx_dt, which actually has the
# time since last negative test
(checkEver <- with(dataf,table(everHadNegTest,
                               TID_NA=is.na(lag_lneg_hdx_dt), useNA='always')))
```

```
##               TID_NA
## everHadNegTest FALSE TRUE <NA>
##          FALSE     7  704    0
##          TRUE   2830  111    0
##          <NA>     18 2441    0
```

```
# Look at actual lag_lneg_hdx_dt values by everHadNegTest
ddply(dataf, .(everHadNegTest), function(x) c(summary(x$lag_lneg_hdx_dt)))
```

```
##   everHadNegTest Min. 1st Qu. Median  Mean 3rd Qu. Max. NA's
## 1          FALSE  101   354.0  681.0 644.9     975 1074  704
## 2           TRUE    0   176.0  434.0 952.5    1134 9925  111
## 3             NA  122   208.8  467.5 803.5    1399 2476 2441
```

6.2 Make compatible with recorded LNT dates

6.2.1 Change incorrect FALSEs

We have 7 cases with everHadNegTest=FALSE and 18 with everHadNegTest=NA but have a time since last negative test. Change their everHadNegTest flag.

```
toTRUE1 <- !dataf$everHadNegTest & !is.na(dataf$lag_lneg_hdx_dt)
toTRUE2 <- is.na(dataf$everHadNegTest) & !is.na(dataf$lag_lneg_hdx_dt)
dataf$everHadNegTest[toTRUE1] <- TRUE
dataf$everHadNegTest[toTRUE2] <- TRUE
```

6.2.2 Change incorrect TRUEs

We have 111 cases who have everHadNegTest=TRUE but have NO time since last negative test. Change their everHadNegTest flag. Change, 9/27/17 - previously was setting to false; now, set to NA.

```
## an alternative to setting to FALSE
toNA <- dataf$everHadNegTest & is.na(dataf$lag_lneg_hdx_dt)
dataf$everHadNegTest[toNA] <- NA
```

6.2.3 Check

```
(checkEver <- with(dataf,table(everHadNegTest,
                               TID_NA=is.na(lag_lneg_hdx_dt), useNA='always')))
```

```
##               TID_NA
## everHadNegTest FALSE TRUE <NA>
##          FALSE     0  704    0
##          TRUE   2855    0    0
##          <NA>      0 2552    0
```

7 Time since last negative test (infPeriod)

7.1 Apply age-16 assumption and summarize

```
################################################################
# CREATE infPeriod and then look at it
################################################################

#### TEMPORARY:
#dataf$age=35

aidsUB <- qweibull(.95,shape=2.516,scale=1/0.086) #17.98418
dataf <- within(dataf,{
                  lastNeg_yrs=lag_lneg_hdx_dt/365
                  infPeriod=ifelse(everHadNegTest,
                                   pmin(lastNeg_yrs, aidsUB),
                                   ifelse(!everHadNegTest,
                                          pmin(hdx_age-16, aidsUB),
                                          NA))
                  earliestInf=hdx_age-infPeriod
                  })
```

```
summary(dataf$infPeriod,digits=3)
```

```

##   0.000   0.607   1.950   4.950   6.980  18.000    2474
```

Excluded 86 cases due to age $\leq$ 16 and no observed infPeriod data.

7.3 Maximum window of 18 years

```
# We did cap some people whose TID's were >aidsUB
(check_cap1 <- with(subset(dataf, everHadNegTest),
                    table(original_over_aidsUB=lastNeg_yrs>aidsUB,
                          infPeriod_over_aidsUB=infPeriod>aidsUB,
                          useNA='ifany')))
```

```
##                       infPeriod_over_aidsUB
## original_over_aidsUB FALSE
##                FALSE  2824
##                TRUE     31
```

Among those with everHadNegTest=TRUE, we capped 31 cases at aidsUB.

```
(check_cap2 <- with(subset(dataf, !everHadNegTest),
                    table(original_over_aidsUB=lastNeg_yrs>aidsUB,
                          infPeriod_over_aidsUB=infPeriod>aidsUB,
                          useNA='ifany')))
```

```
##                       infPeriod_over_aidsUB
## original_over_aidsUB FALSE
##                <NA>   696
```

Among those with everHadNegTest=FALSE, no one had an original TID value.

```
(check_cap3 <- with(subset(dataf, is.na(everHadNegTest)),
                    table(original_over_aidsUB=lastNeg_yrs>aidsUB,
                          infPeriod_over_aidsUB=infPeriod>aidsUB,
                          useNA='ifany')))
```

```
##                       infPeriod_over_aidsUB
## original_over_aidsUB <NA>
##                <NA> 2474
```

Among those with everHadNegTest=NA, no one had an original TID value.

8 Final analytic dataset

8.1 Reminder of data cleaning

Final subset is of size 6025 * Diagnoses included: - Year: non-missing, and 2005 onwards - Occurred in WA state - Excluded 14987 cases based on year and hst restrictions (no missingness in age and year of diagnosis in data for 2015 estimates). * Ages included: - If missing age, must have recorded time of last negative test - If age $\leq$ 16, must have recorded time of last negative test - Excluded 86 cases due to age $\leq$ 16 and no observed LNT.
